

# Notice:

## **Be Alert for Outdoor Methamphetamine Lab Hazards**

Methamphetamine cooking and dump sites have been found on national forest lands on the George Washington & Jefferson National Forests. Your safety is our priority and it's your responsibility! Please get educated and be vigilant when working in or visiting your national forest.

### **What you need to know:**

- Methamphetamine, also known as meth, crank, crystal, and speed, is an illegal drug. Meth is a powerful central nervous system stimulant that is highly addictive.
- Methamphetamine (meth) is easily made by individuals using household ingredients. At first glance, many abandoned meth cooking sites, also called labs or lab dump sites, look like trash or litter.
- A person using meth can be anxious, paranoid and violently dangerous. If you suspect someone, leave the area immediately.
- The chemicals used to produce meth are extremely hazardous. The greatest risk to you are chemical poisoning or burns.
- Meth production is dangerous. The process mixes materials that can easily ignite or explode.

**If you find a possible trash dump, avoid contact with any of the items. Leave the area immediately and report the location to the U.S. Forest Service: 540-984-4101 or your local Sheriff's Office: 911**
